

# Detective's Notebook

## IGEL Ransomware Challenge

OK – you're on the case to find out who exposed "The Firm" to a cyberattack. We've narrowed it down to six suspects. We're sure these are all nice people, but the fact is one of them made a mistake and an endpoint was breached.

It's your job to find out who done it. One thing we do know – whoever the culprit is, they weren't using an IGEL OS powered device ... IGEL's OS is read-only and very secure.

# Suspect List

Here are the known suspects, locations and threats. We need to rule out the innocent suspects.  
Review the evidence at [www.IGELWhoDoneIT.com](http://www.IGELWhoDoneIT.com) to solve this case.
